

MODEL 65XP

6" Capacity Hand-Fed Chipper

The Model 65XP is a **powerful yet compact unit** that makes a great rental machine. The 6" x 12" wide infeed opening is twice the size of most competitive machines. A number of options are available on this unit, including discharge options and self-propelled track undercarriage. The Model 65XP Brush Bandit is highly portable and will provide years of dependable service for homeowners, contractors, and tree care companies. Pound for pound, this is **one of the toughest chippers money can buy.**

COMPACT CHIPPER, BIG APPETITE.

- 6" capacity
- Wide 6" x 12" opening
- Up to 49.6-horsepower engines

Extremely Easy to Service and Maintain

The chipper hood opens making it easy to access the knives. Bolt-in knives are easy to change and reversible with two usable edges before the knives need to be sharpened. Knives may be sharpened up to five or six times before replacement. All grease points are easy to reach, and all other service areas are easy to access. (Note: knife hardware must be replaced after 4-5 knife rotations or changes)

Powerful Feed System

The powerful single feed wheel system crushes and compresses limby materials. A 24 cubic-inch displacement hydraulic motor has the power to pull long material into the chipper, reducing the cost of converting trees and brush into chips by reducing the amount of trimming.

Throat Openings Twice as Wide as the Competition

The chipper opening into the 6" capacity Model 65XP is 6" high by 12" wide. All Bandit chippers have the widest possible chipper openings. The opening into our Model 65XP is twice as wide compared to most of our competitors. Their openings are generally 6" by 6". A wider opening allows multiple pieces to be fed and provides a bigger opening to accommodate limby or crotch material, reducing the effort and time needed to process the material. That is why our 65XP is nearly twice as productive as our competitors. Operators are more productive and less fatigued.

90° Feed System

Bandit's 65XP disc-style chippers are set at a right angle to the flow of material into the chipper. The knives are set at a precise angle and assist the feed system in pulling material into the chipper and breaking down limby material.
