

MODEL 90XP

9" Capacity Hand-Fed Chipper

The Model 90XP is a compact, highly maneuverable 9" capacity disc-style chipper. This **easy-to-tow** chipper features a 9-1/2" by 17" opening that allows it to process multiple stems as well as large diameter wood up to 9". The Model 90XP comes with the same **powerful feed system** found on larger Bandit® machines, engine options from 37- 89 horsepower, and is backed by Bandit's **five-year GUTS warranty**. All that and more is what makes the Model 90XP one of the most popular chippers for professionals.

COMPACT CHIPPERS, BIG APPETITES.

- Popular among rental companies, tree services, utility line contractors and municipalities
- Impressive **17" wide throat opening**
- Available with **gas, diesel or PTO power**

Extremely Easy to Service and Maintain

The chipper hood opens making it **easy to get at the knives**. Bolt-in knives are easy to change and reversible, with two usable edges before the knives need to be sharpened. All grease points are **easy to reach**, and all other service areas are **easy to access**.

Fuel Efficient

The chipping angle and precise knife angle, along with the synchronized feed system, **produces uniform chips**, reduces fuel consumption and vibration while reducing the amount of energy required to convert trees and brush into chips.

Powerful Slide Box Feed System

The Model 90XP features (2) 7-1/2" diameter feed wheels that crush and compress material and have the power to pull long material into the chipper. The Model 90XP also features (2) powerful 15.9 CID **hydraulic motors**. A dual feed wheel system drastically increases pulling and compressing power. Operators will spend less time trimming and repositioning material, leading to **greater productivity**.

Wide Chipper Openings

The Model 90XP chipper **throat opening is 9-1/2" by 17"** and infeed hopper opening is 29" high by 35" wide. A wide opening allows multiple pieces to be fed and provides a bigger opening for limby or crotch material, **increasing production** and reducing the amount of trimming required to process material. Operators are more productive and less fatigued.
