

MODEL 72FM

Forestry Mulcher

Able to tackle light to medium-duty land clearing projects, the Model 72FM Forestry Mulcher **quickly attaches to skid-steers or compact track loaders (CTL)** to deliver exceptional mowing and mulching performance. It's powered by the skid-steer's on-board hydraulic systems for simple operation in a variety of situations, from lot clearing to trail and power line maintenance. Based on the industry-proven mower heads used on Bandit's larger dedicated prime movers, the 72FM is suited for removing heavy brush, undergrowth, bushes and trees.

Turn your skid steer or CTL into a land clearing powerhouse! The Model 72FM delivers a wide cut to easily handle larger clearing projects, but remains exceptionally maneuverable for tight location. It's a simple, effective, low-maintenance land clearing solution for operations large and small.

Easy to Use and Maintain

The Model 72FM conveniently attaches via quick-attach plate to the front of a skid-steer loader in just a few easy steps. The skid steer's hydraulic systems power a single variable speed hydraulic motor on the mulching head, giving the Model 72FM impressive grinding power. And because it operates straight from the skid-steer's hydraulic systems, the Model 72FM requires very little maintenance to keep it in top condition.

Built to Out-Perform & Out-Last the Competition

Based on the proven design of Bandit's forestry mower heads for our prime movers, the Model 72FM aggressively cuts, chips and grinds material, utilizing a 72-inch cutting width and 42 carbide teeth arranged in a unique pattern that pushes material toward the center of the mulching head. The teeth cutter body features a uniquely designed patent-pending raker that regulates bite aiding in the prevention of drum binding and also creating a finer end product. These heads have plenty of power coming from a 112cc variable speed hydraulic motor that adjusts with the load on the head providing torque when encountering solid wood and speed when encountering brush. And all mulching heads are constructed using extensive internal reinforcement and the highest-grade material available to ensure a long, productive service life.

Anvil Increases Efficiency

An anvil comes standard on the Model 72FM. It acts as a second cutting surface, giving you a finer end product on the first pass. This improves productivity and reduces fuel consumption. The anvil also helps to prevent material from jamming the drum, a common problem that plagues competitors equipment.

Standard Features:

- Hydraulic protection manifold safe guards your equipment's hydraulic system.
- Pinned adjustable push bar for larger tree takedowns
- Variable speed axial piston motor for maximum grinding performance
- Spring loaded hose holder to eliminate hose binding issues

Specifications

Dimensions:

HEIGHT:	5' 2"
CUTTING WIDTH:	72"
WEIGHT:	2,900 lbs.
OVERALL WIDTH:	87-1/4"
HYDRAULIC PSI:	3,000 - 5,500
HYDRAULIC HIGH FLOW:	30 - 50 GPM
LEXON:	As required
